

Project Iteration 1.2: Detailed User Stories, Requirements, and Initial Prototype

1. Introduction

Course: DIGT2107 – Fall Term 2025

Instructor: Dr. May Haidar

Due Date: September 19, 2025

Project name: Reclaim

Team number: Group 4

Team members: Brianna Nguyen, Justin Gamez, Kieran Bendell, Ruqayya Naqvi

2. Functional and Non-Functional Requirements

Reclaim is a web application that addresses regulating student mental health, specifically those in university. By providing wellness tools, integrated resources, personalized dashboards and insights, the system will help users track their mood, develop habits and seek wellness.

2.1 Functional Requirements

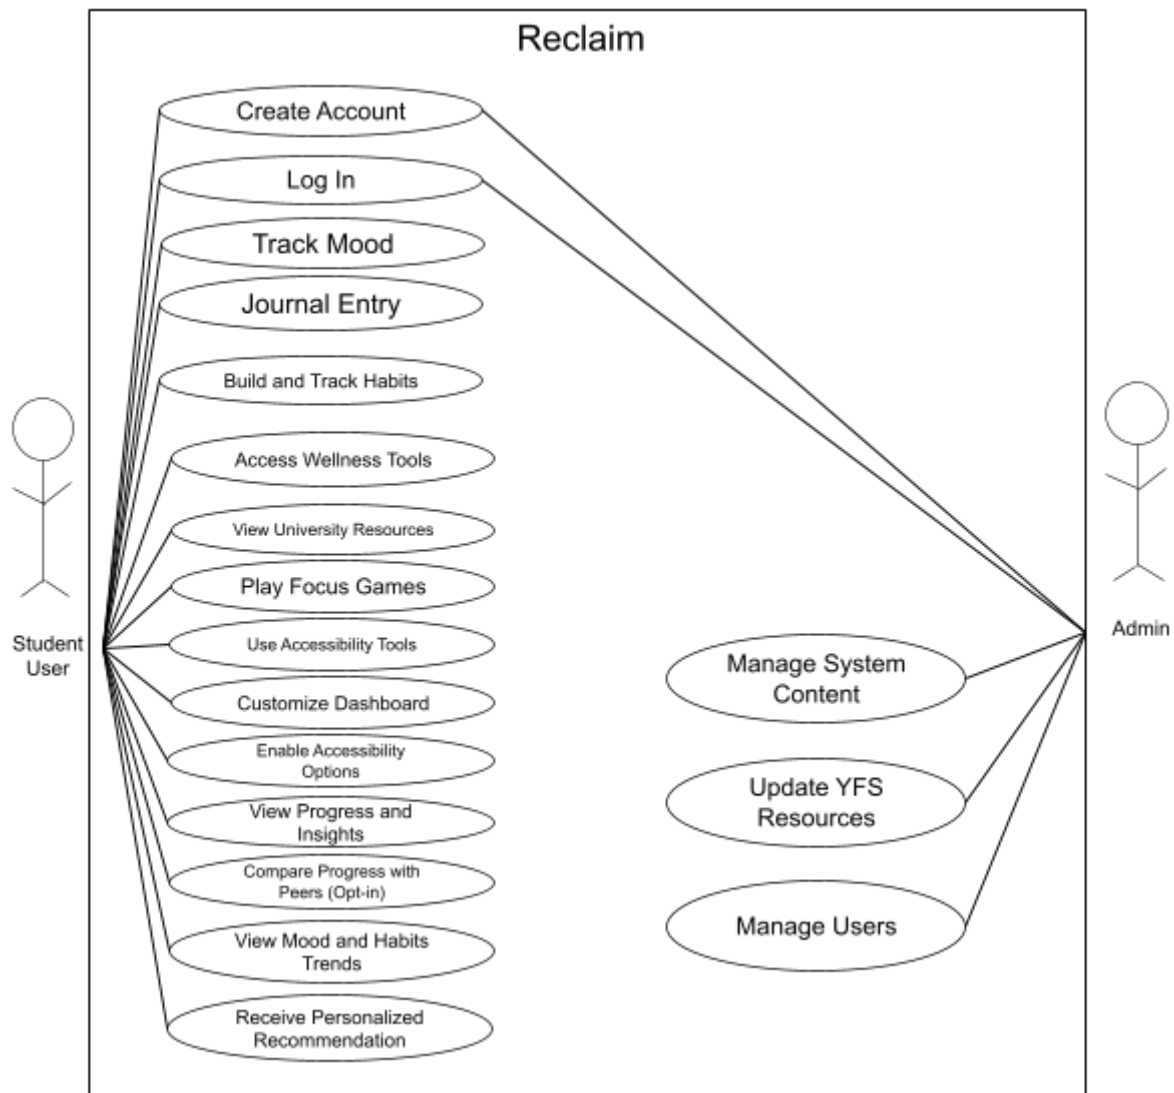

- Requirement 1: The system shall allow users and admins to create an account using an email and password.
 - User story mapped to this requirement: Register and Login
- Requirement 2: The system shall allow users to log their mood daily using emoji sliders and short notes.
 - User story mapped to this requirement: Users daily tracking
- Requirement 3: The system shall provide guided prompts and a blank journaling area for self-reflection.
 - User story mapped to this requirement: Users daily tracking
- Requirement 4: The system shall enable users to set, track and remind them of their habits (e.g., meditation, sleep, exercise).
 - User story mapped to this requirement: Habit and wellness tools
- Requirement 5: The system shall offer breathing exercises, time management tips and mindfulness exercises.
 - User story mapped to this requirement: Habit and wellness tools
- Requirement 6: The system shall link directly to YFS mental health services.
 - User story mapped to this requirement: View University Resources
- Requirement 7: The system shall include focus games or habit-streak rewards that encourage consistent engagement.

- User story mapped to this requirement: Focus Games
- Requirement 8: The system shall allow users to arrange widgets (mood tracker, habits, reminders) based on their preferences to arrange their dashboard.
 - User story mapped to this requirement: Customize Dashboard
- Requirement 9: The system shall provide accessibility options such as text-to-speech.
 - User story mapped to this requirement: Accessibility tools
- Requirement 10: The system shall show users visual summaries of their mood, habits and activities.
 - User story mapped to this requirement: View progress and insights
- Requirement 11: The system shall allow friendly comparison of progress among peers if the user opts-in.
 - User story mapped to this requirement: View progress and insights
- Requirement 12: The system shall display trends over time and correlations (e.g., between sleep and mood).
 - User story mapped to this requirement: View progress and insights
- Requirement 12: The system shall offer personalized recommendations based on tracked data.
 - User story mapped to this requirement: Receive personalized recommendations
- Requirement 13: The system shall allow admins to modify system content including prompts, exercises YFS resource information and users.
 - User story mapped to this requirement: Admin management systems

2.2 Non-functional Requirements

- Usability: The interface should be intuitive, accessible and simple.
- Privacy and Security: All personal wellness data must be encrypted and stored securely. Additionally, journals must be accessible only to the user.
- Aesthetics: Interface design should prompt calmness and focus (minimal clutter and soothing colours).
- Responsiveness: The web application should work seamlessly with laptop, tablet and phone screen sizes.
- Scalability: The architecture should allow for the future addition of more complex features.
- Performance: Pages and dashboards should load within 3 seconds on standard Wi-fi or mobile data.

3. Use Cases

3.3 Use Case Descriptions

1. **Use Case 1:** Create Account

Actors: Student User, Admin

Description: Allows users and admin to register using their York university email and a password.

Preconditions: User/admin is not yet registered.

Main Flow:

- The user/admin selects "Sign Up."
- The system displays an account creation form.
- The user/admin enters an email and password.
- The user/admin validates and stores users credentials.

Postconditions: Account is created and the user/admin can log in.

2. **Use Case 2:** Log In

Actors: Student User, Admin

Description: User or admin logs into the app to access wellness tools.

Preconditions: The user or admin must have an existing account.

Main Flow:

- The user or admin selects “Log In.”
- The system prompts for email and password.
- Credentials are verified.
- The system grants access to the user dashboard.

Postcondition: User or admin is authenticated and redirected to the main dashboard.

3. **Use Case 3: Track Mood**

Actors: Student User

Description: User logs daily mood using emoji sliders and short notes.

Preconditions: User is logged in.

Main Flow:

- The user selects “Track Mood.”
- The system displays mood sliders and notes input.
- The user logs mood and saves it.

Postconditions: Mood data is stored and visible in the user’s progress history.

4. **Use Case 4: Journal Entry**

Actors: Student User

Description: Allows users to write reflections using prompts or free journaling.

Preconditions: User is logged in.

Main Flow:

- The user selects “Journal.”
- The system offers a guided prompt or blank entry option.
- The user writes and saves their entry.

Postconditions: The journal entry is securely saved under the user’s account.

5. **Use Case 5: Build and Track Habits**

Actors: Student User

Description: User sets, tracks, and receives reminders for habits.

Preconditions: User is logged in.

Main Flow:

- The user selects “Habit Tracker.”
- The system allows adding new habits and setting reminders.
- The user marks habits as completed.
- The system updates streaks and progress data.

Postconditions: Habit data and reminders are saved.

6. **Use Case 6: Access Wellness Tools**

Actors: Student User

Description: User accesses built-in wellness exercises and resources.

Preconditions: User is logged in.

Main Flow:

- The user selects “Wellness Tools.”

- The system displays exercises like breathing or mindfulness.
- The user completes an exercise.

Postconditions: The system logs usage and returns to the main dashboard.

7. **Use Case 7:** View University Resources

Actors: Student User, Admin

Description: User views university mental health resources. Admin updates the information.

Preconditions: Admin has updated resource data.

Main Flow (User):

- The user selects “University Resources.”
- The system displays available services and contact links.

Main Flow (Admin):

- Admin logs into the admin panel and updates resources.
- The system saves and refreshes listings.

Postconditions: Users have access to accurate university support resources.

8. **Use Case 8:** Play Focus Games

Actors: Student User

Description: The user plays games or maintains habit streaks for motivation.

Preconditions: User is logged in.

Main Flow:

- The user opens “Games.”
- The system displays available focus or streak challenges.
- The user completes a challenge.
- The system rewards progress points or badges.

Postconditions: Rewards and progress data are updated.

9. **Use Case 9:** Customize Dashboard

Actors: Student User

Description: Allows dashboard widget customization (mood, journal, habits).

Preconditions: User is logged in.

Main Flow:

- The user selects “Customize Dashboard.”
- The system displays available widgets.
- The user arranges or toggles features.
- The system saves preferences.

Postconditions: Dashboard layout updates for the user.

10. **Use Case 10:** Enable Accessibility Options

Actors: Student User

Description: User enables accessibility settings such as text-to-speech or font resizing.

Preconditions: User is logged in.

Main Flow:

- The user opens “Accessibility Settings.”
- The system displays available options.
- The user enables text-to-speech or other settings.

Postconditions: Settings are applied to the user interface.

11. **Use Case 11:** View Progress and Insights

Actors: Student User

Description: Displays user's progress summaries and performance charts.

Preconditions: User has recorded data.

Main Flow:

- The user selects "Progress Dashboard."
- The system retrieves stored mood and habit data.
- Visual summaries are displayed.

Postconditions: Progress charts are visible and up to date.

12. **Use Case 12:** Compare Progress with Peers (Opt-In)

Actors: Student User

Description: Allows friendly progress comparison among peers (if the user consents).

Preconditions: User opts into comparison mode.

Main Flow:

- The user activates "Peer Comparison."
- The system aggregates anonymous peer data.
- The user views comparative charts.

Postconditions: Comparison results are displayed securely and anonymously.

13. **Use Case 13:** View Mood and Habit Trends

Actors: Student User

Description: User views long-term correlations between mood and activities.

Preconditions: User has consistent tracking data.

Main Flow:

- The user selects "Trends."
- The system analyzes mood and habit history.
- Correlations (e.g., sleep vs. mood) are displayed.

Postconditions: User gains insight into personal wellness patterns.

14. **Use Case 14:** Receive Personalized Recommendations

Actors: Student User

Description: The system offers tips and suggestions based on user data.

Preconditions: User has stored tracking data.

Main Flow:

- The user opens "Recommendations."
- The system analyzes patterns.
- The system generates tailored wellness advice.

Postconditions: Recommendations are displayed to the user.

15. **Use Case 15:** Manage System Content

Actors: Admin

Description: Admin manages app content such as prompts, games, and exercises.

Preconditions: Admin is logged into the management portal.

Main Flow:

- Admin opens “Manage Content.”
- The system displays content lists.
- Admin adds, edits, or removes content.

Postconditions: System content is updated for all users.

16. **Use Case 16:** Update YFS Resource Information

Actors: Admin

Description: Admin maintains up-to-date information on YFS wellness resources.

Preconditions: Admin is authenticated.

Main Flow:

- Admin selects “Manage Resources.”
- The system displays current listings.
- Admin edits or adds new data.
- The system saves updates.

Postconditions: Updates resources information is available to all users.

17. **Use Case 17:** Manage Users

Actors: Admin

Description: Admin manages users using Reclaim.

Preconditions: Admin is authenticated.

Main Flow:

- Admin selects “Manage Users.”
- The system displays current users.
- Admin can remove or add users.
- The system saves updates.

Postconditions: Updates user information.

4. User stories

4.1. Category 1: Site Features

- **Register and Login**

- As a user or admin, I want to register and login to my own personal account so that I can see my personal progress or manage site details.
- **Acceptance Criteria:**
 - The system prompts users/admins to register to use functionalities
 - The system prompts users/admins to register with email, first name, and username.
 - The system will validate all fields before allowing user to register
 - The system will authenticate and validate user activities as they navigate the platform
- **Priority:** High
- **Cost:** 1 day

- **Users daily tracking**

- As a user, I want to track my mood and write in a daily journal to keep track of how I'm feeling.
- **Acceptance Criteria:**
 - The system prompts a user accordingly one time a day unless the user opts out.
 - The user can properly log their mood, and the system will accurately log and store that data to display to the user at a later time.
 - The user can properly write in a free journal, and the system will accurately log and store that data to display to the user at a later time.
- **Priority:** Medium - High
- **Cost:** 2 days

- **Habit and wellness tools**

- As a user, I would want to easily navigate to resources that help me build and track habits, as well as finding wellness tools to help me with day to day life.
- **Acceptance Criteria:**
 - The system validates if a user is logged in and valid, only then allowing the user to proceed to the respective resource.
 - Wellness tools offers exercises like breathing or mindfulness activities
 - Habit building + tracking allows the user to add new habits, set reminders, and mark habits as completed
 - The system stores progress data, and displays streaks according to the user's data.
- **Priority:** Medium - High
- **Cost:** 7 days

- **View University Resources**

- As a user, when I navigate to the “University Resources” site, the system should display accurate and available wellness resources provided by YorkU so I can easily find it when needed.
- **Acceptance Criteria:**
 - The system will let anyone view this information, no login required as this is public information.
 - The system will allow admin users to modify information to maintain accurate contact information and links.
 - The system will attempt to scrape york university's website to automatically have the information up to date.
 - The site displays information about resources such as: what kind of resource it is, contact information, location, resource time slots (for resources similar to office hours), and identify what courses it would apply to
- **Priority:** High
- **Cost:** 5 days

- **Customize Dashboard**

- As a user, I want to edit my dashboard so I can access tools like mood tracker, daily journal, and track habits all in one tab to make it accessible and useful for me.
- **Acceptance Criteria:**
 - The system requires a user to be logged in to view their dashboard, if a user is not logged in the system will prompt them to login or register.
 - The dashboard will have minimum modules of: mood, journal, and habits
 - A user can re-arrange modules following a grid and preset widget sizes and orientations.
 - A user can save the customizations and the system will save the changes and display them according to the configuration
- **Priority:** Medium
- **Cost:** 7 days

- **Accessibility tools**

- As a user, if I need accessibility accommodations, the system should abide by the Accessibility for Ontarians with Disabilities Act, 2005 (AODA) requirements.
- **Acceptance Criteria:**
 - The system will allow any user to enable accessibility features as required by the AODA
 - The system will offer screen reading accessibility, extra bold fonts, and high contrast colors.
 - The system will remember the accessibility settings and save the configuration and maintain it for the designated user.
- **Priority:** High
- **Cost:** 4 days

- **Admin management systems**

- As an admin, I should be able to modify system content such as prompts, games, and exercises, YFS Resource Information, and manage non admin users to ensure data is up to date and working smoothly.
- **Acceptance Criteria:**
 - The system requires an admin user to be logged in to view this
 - if a user is not logged in the system will prompt them to login or register
 - If a user is not an admin it will inform the user the page does not exist
 - Admin can edit available games and exercises.
 - Admin can update YFS Resource Information
 - Admin can manage users
- **Priority:** Medium - High
- **Cost:** 3 days

- **Focus Games**

- As a user, when I navigate to the “games” tab I can play focus games to build a streak and complete daily challenges.
- **Acceptance Criteria:**
 - The system requires an admin user to be logged in to view this, if a user is not logged in the system will prompt them to login or register.
 - The system has games to help with memory, focus, and amusement.
 - The system tracks game progress and saves it for the user to review later.
- **Priority:** Low
- **Cost:** 3 days

4.2. Category 2: Data monitoring and Analytics

- **View progress and insights**

- As a user, I would like to view my insights displayed in charts and other informative ways to learn about myself.
- **Acceptance Criteria:**
 - The system requires a user to be logged in to view this, if a user is not logged in the system will prompt them to login or register.
 - Users can view insights like mood and habit trends, and journal entry streaks
 - Users can select different specific users to share specified insights with, or can make their own specified insights public
 - The system will display information in a consumer friendly fashion, such as using graphs, progress bars, and charts to share information.
- **Priority:** Low - Medium
- **Cost:** 3 days

- **Receive Personalized Recommendations**

- As a user, I want personalized recommendations so that I can improve my wellness based on my needs.

- **Acceptance Criteria:**
 - The system requires a user to be logged in to view this, if a user is not logged in the system will prompt them to login or register.
 - Users must opt into this since the system will be accessing personal notes and data and generate tailored recommendations.
 - The system must take all user data and mention current user trends
 - The system must display all information accurately
- **Priority:** Low - Medium
- **Cost:** 7 days

7. Iteration Plan and Backlog

7.1. Iteration Plan

Weeks 3–5: Requirements and Planning

- Finalized Functional and Non-Functional Requirements (Justin and Brianna).
- Wrote detailed user stories and completed the use case diagram (all members).
- Reviewed and prioritized the feature backlog (Kieran and Ruqayya).
- Set up the GitHub repository and initial folder structure (Justin).
- No development started yet — first prototype will begin in the next phase.

Weeks 6–9: Begin Prototype Development

- Justin will build frontend components for mood tracking and journaling.
- Kieran will work on frontend and begin backend routes for saving mood and journal data.
- Ruqayya will continue developing UI elements and navigation.
- Brianna will begin the testing plan and track development progress.
- Goal: complete a basic working prototype using mock data for mood and journaling features.

Weeks 10–12: Core Features and Fall Submission

- Add habit tracking and dashboard customization functionality (Justin, Kieran, Ruqayya).
- Expand backend logic for storing habit data and user preferences.
- Update documentation and write basic test cases (Brianna).
- Finalize the Fall-term submission: tag GitHub version, prepare PDF deliverables.

Winter Term (Planned Work)

- Add advanced features: progress dashboard, personalized recommendations, and peer comparison.
- Backend work will include analytics and trend tracking based on user data.
- Frontend work will focus on UI polish, accessibility improvements, and new feature screens.

- Continue testing and documentation as features are added.
- Final weeks will focus on system testing, bug fixes, and preparing for final project presentation and submission.

7.2. Updated Backlog

- **Register and Login**
Status: Planned
Priority: High
 This is required to access most platform features. Will be implemented early.
- **Users Daily Tracking (Mood + Journal)**
Status: Planned
Priority: High
 Core feature for the first prototype. Includes mood sliders and free journaling.
- **Habit and Wellness Tools**
Status: Backlog
Priority: Medium–High
 Includes habit tracking, reminders, and built-in wellness tools (e.g. breathing exercises). Will be developed after mood/journal features.
- **View University Resources**
Status: Planned
Priority: High
 Public feature that shows YorkU mental health services. Editable by admins.
- **Customize Dashboard**
Status: Backlog
Priority: Medium
 Users will be able to re-arrange widgets like mood, journal, and habits. Planned for after core features are working.
- **Accessibility Tools (AODA Compliance)**
Status: Backlog
Priority: High
 Includes screen reading, bold fonts, and high contrast options. Will be implemented during UI development.
- **Progress and Insights Dashboard**
Status: Backlog
Priority: Medium
 Visual summaries and trend data for mood and habits. Requires existing user data, so planned for later.
- **Peer Progress Comparison (Opt-In)**
Status: Backlog
Priority: Medium
 Allows users to see anonymized comparisons if they choose to opt in. Depends on implementation of tracking features.
- **Personalized Recommendations**
Status: Backlog
Priority: Medium

Offers suggestions based on tracked habits and mood. Planned for winter term once data collection is in place.

- **Focus Games / Habit Streak Rewards**

Status: Backlog

Priority: Low

Optional gamification to encourage engagement. Not part of the initial prototype.

- **Admin Content Management (Prompts, Tools, Games)**

Status: Backlog

Priority: Low

Allows admins to manage app content. Will be added after main features are working.

- **Auto-Sync / YFS Resource Scraping**

Status: Backlog

Priority: Medium

Planned enhancement to keep university resources up to date automatically.
