

DIGT2107: Practice of Software Development

Project Iteration 2.1: Testing Document

1. Introduction

Course: DIGT2107 – Fall Term 2025

Instructor: Dr. May Haidar

Due Date: November 2, 2025

Project name: Reclaim

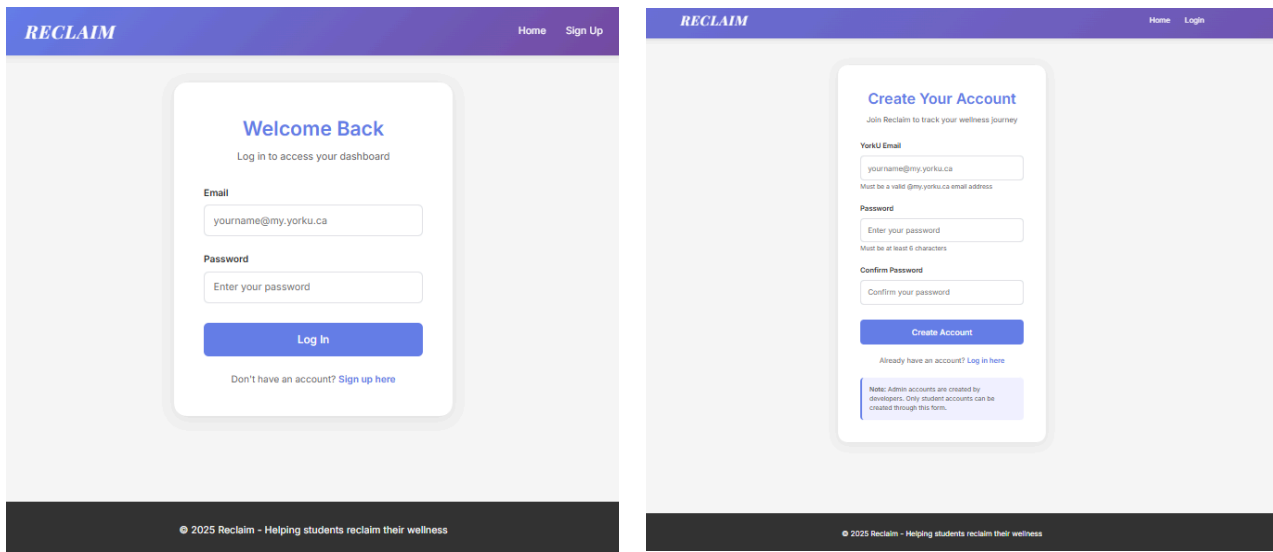

Team number: Group 4

Team members: Brianna Nguyen, Justin Gamez, Kieran Bendell, Ruqayya Naqvi

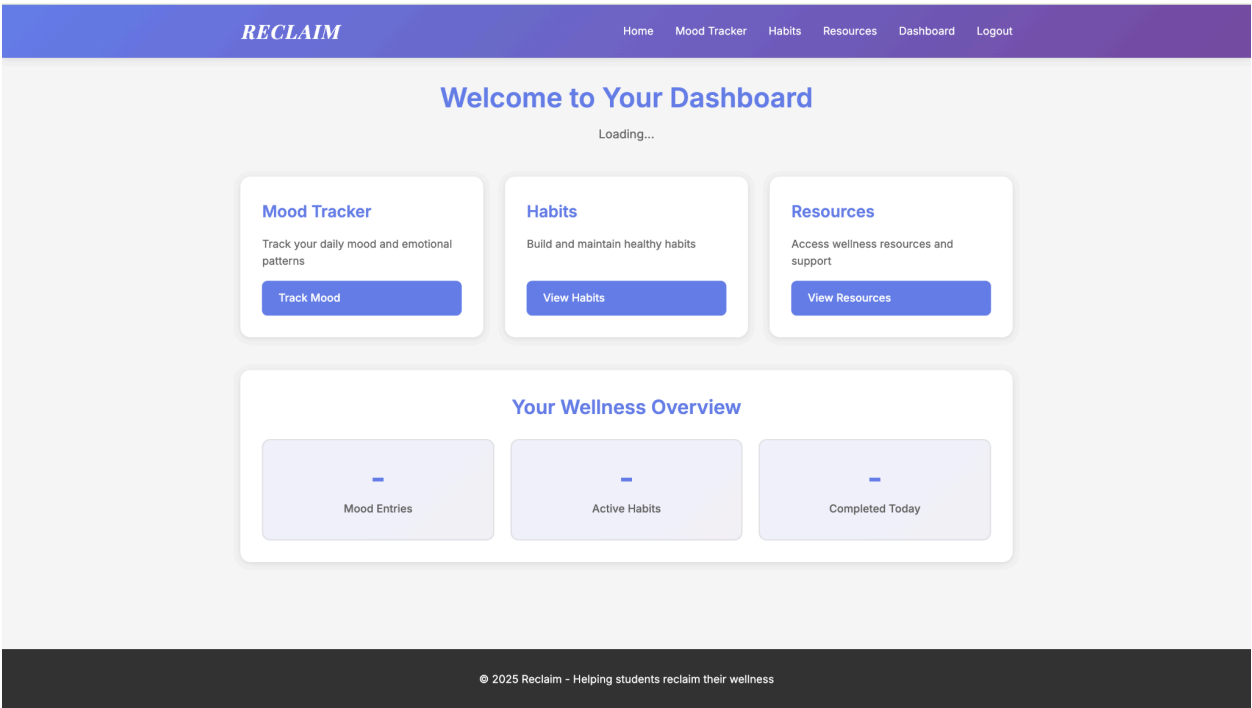

GitHub repository: <https://github.com/justingmz77/Reclaim>

3. Updated Requirements and Use Cases

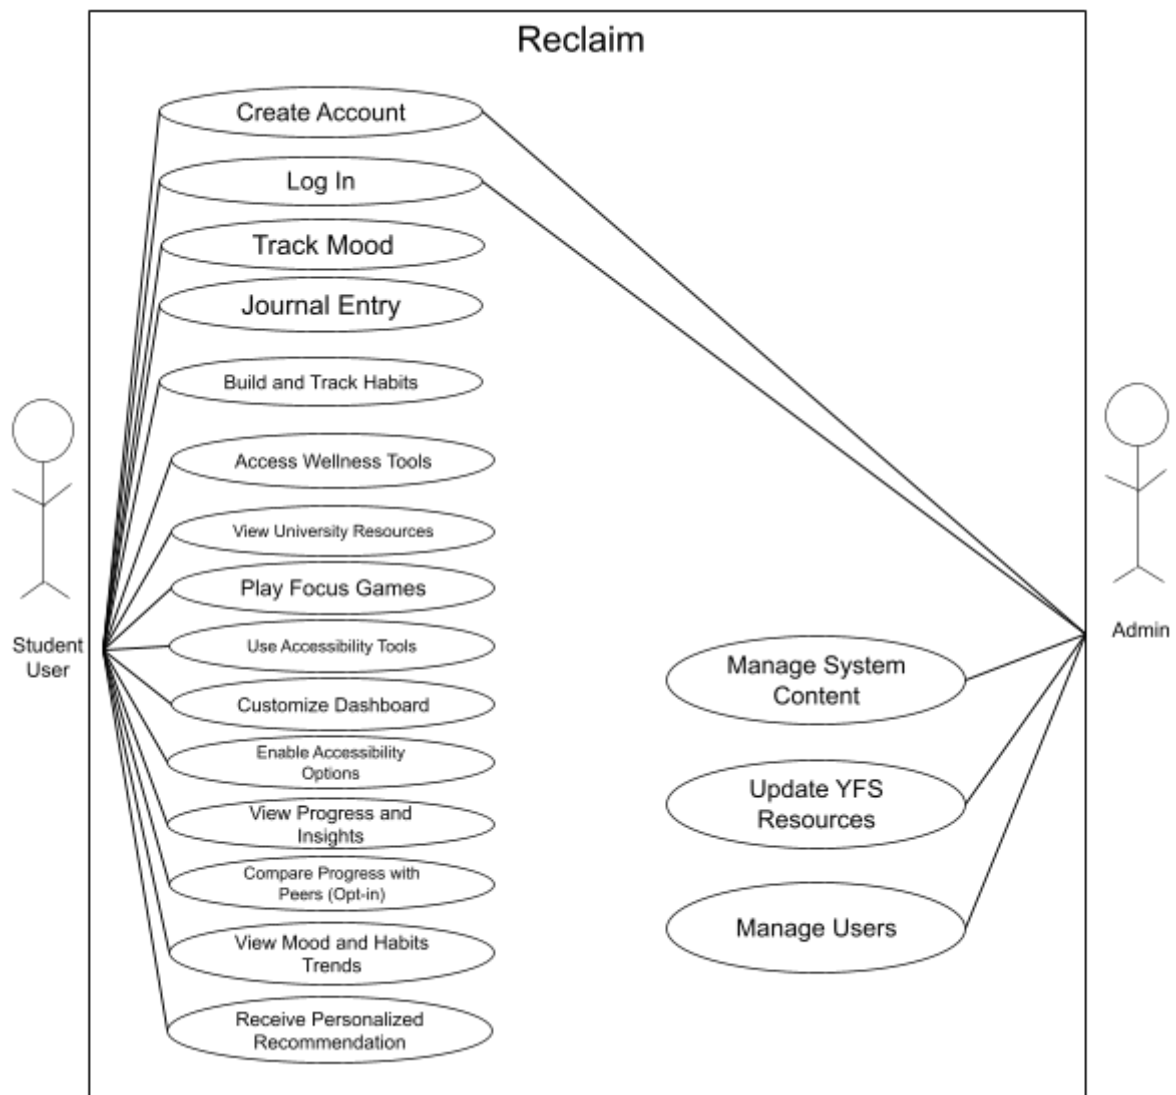

3.1 Functional Requirements

- Requirement 1: The system shall allow users and admins to create an account using an email and password.
 - User story mapped to this requirement: Register and Login
- Requirement 2: The system shall allow users to log their mood daily using emoji sliders and short notes.
 - User story mapped to this requirement: Users daily tracking
- Requirement 3: The system shall provide guided prompts and a blank journaling area for self-reflection.
 - User story mapped to this requirement: Users daily tracking
- Requirement 4: The system shall enable users to set, track and remind them of their habits (e.g., meditation, sleep, exercise).
 - User story mapped to this requirement: Habit and wellness tools
- Requirement 5: The system shall offer breathing exercises, time management tips and mindfulness exercises.
 - User story mapped to this requirement: Habit and wellness tools
- Requirement 6: The system shall link directly to YFS mental health services.
 - User story mapped to this requirement: View University Resources
- Requirement 7: The system shall include focus games or habit-streak rewards that encourage consistent engagement.
 - User story mapped to this requirement: Focus Games
- Requirement 8: The system shall allow users to arrange widgets (mood tracker, habits, reminders) based on their preferences to arrange their dashboard.
 - User story mapped to this requirement: Customize Dashboard
- Requirement 9: The system shall provide accessibility options such as text-to-speech.
 - User story mapped to this requirement: Accessibility tools
- Requirement 10: The system shall show users visual summaries of their mood, habits and activities.
 - User story mapped to this requirement: View progress and insights
- Requirement 11: The system shall allow friendly comparison of progress among peers if the user opts-in.
 - User story mapped to this requirement: View progress and insights
- Requirement 12: The system shall display trends over time and correlations (e.g., between sleep and mood).
 - User story mapped to this requirement: View progress and insights
- Requirement 13: The system shall offer personalized recommendations based on tracked data.
 - User story mapped to this requirement: Receive personalized recommendations
- Requirement 14: The system shall allow admins to modify system content including prompts, exercises YFS resource information and users.
 - User story mapped to this requirement: Admin management systems

3.2 Non-functional Requirements

- Usability:
 - The interface shall allow first-time users to complete their first log (mood/journal) in under 2 minutes without external help
- Privacy and Security:
 - System logs shall record all login attempts and data changes with audit retention for 180 days
- Aesthetics:
 - Interface should use no more than 5 primary colours and maintain a minimum 4.5:1 contrast ratio for accessibility compliance (WCAG 2.1 AA)
- Responsiveness:
 - The layout shall adapt automatically to screens between 375px and 1440px width (mobile to desktop)
 - All UI elements must remain fully functional and visible without horizontal scrolling on mobile screens
- Scalability:
 - The system architecture shall support a 100% increase in concurrent users (up to 1,000 active users) without requiring code changes
- Performance:
 - All primary pages (dashboard, journal, resources) shall load within 3 seconds on 10 Mbps Wi-Fi and 5 seconds on 4G mobile data

3.3 Use Cases

3.4 Use Case Descriptions

1. **Use Case 1: Create Account**

Actors: Student User, Admin

Description: Allows users and admin to register using their York university email and a password.

Preconditions: User/admin is not yet registered.

Main Flow:

- The user/admin selects "Sign Up."
- The system displays an account creation form.
- The user/admin enters an email and password.
- The user/admin validates and stores users credentials.

Postconditions: Account is created and the user/admin can log in.

2. **Use Case 2: Log In**

Actors: Student User, Admin

Description: User or admin logs into the app to access wellness tools.

Preconditions: The user or admin must have an existing account.

Main Flow:

- The user or admin selects "Log In."
- The system prompts for email and password.
- Credentials are verified.
- The system grants access to the user dashboard.

Postcondition: User or admin is authenticated and redirected to the main dashboard.

3. **Use Case 3:** Track Mood

Actors: Student User

Description: User logs daily mood using emoji sliders and short notes.

Preconditions: User is logged in.

Main Flow:

- The user selects "Track Mood."
- The system displays mood sliders and notes input.
- The user logs mood and saves it.

Postconditions: Mood data is stored and visible in the user's progress history.

4. **Use Case 4:** Journal Entry

Actors: Student User

Description: Allows users to write reflections using prompts or free journaling.

Preconditions: User is logged in.

Main Flow:

- The user selects "Journal."
- The system offers a guided prompt or blank entry option.
- The user writes and saves their entry.

Postconditions: The journal entry is securely saved under the user's account.

5. **Use Case 5:** Build and Track Habits

Actors: Student User

Description: User sets, tracks, and receives reminders for habits.

Preconditions: User is logged in.

Main Flow:

- The user selects "Habit Tracker."
- The system allows adding new habits and setting reminders.
- The user marks habits as completed.
- The system updates streaks and progress data.

Postconditions: Habit data and reminders are saved.

6. **Use Case 6:** Access Wellness Tools

Actors: Student User

Description: User accesses built-in wellness exercises and resources.

Preconditions: User is logged in.

Main Flow:

- The user selects “Wellness Tools.”
- The system displays exercises like breathing or mindfulness.
- The user completes an exercise.

Postconditions: The system logs usage and returns to the main dashboard.

7. **Use Case 7:** View University Resources

Actors: Student User, Admin

Description: User views university mental health resources. Admin updates the information.

Preconditions: Admin has updated resource data.

Main Flow (User):

- The user selects “University Resources.”
- The system displays available services and contact links.

Main Flow (Admin):

- Admin logs into the admin panel and updates resources.
- The system saves and refreshes listings.

Postconditions: Users have access to accurate university support resources.

8. **Use Case 8:** Play Focus Games

Actors: Student User

Description: The user plays games or maintains habit streaks for motivation.

Preconditions: User is logged in.

Main Flow:

- The user opens “Games.”
- The system displays available focus or streak challenges.
- The user completes a challenge.
- The system rewards progress points or badges.

Postconditions: Rewards and progress data are updated.

9. **Use Case 9:** Customize Dashboard

Actors: Student User

Description: Allows dashboard widget customization (mood, journal, habits).

Preconditions: User is logged in.

Main Flow:

- The user selects “Customize Dashboard.”
- The system displays available widgets.
- The user arranges or toggles features.
- The system saves preferences.

Postconditions: Dashboard layout updates for the user.

10. **Use Case 10:** Enable Accessibility Options

Actors: Student User

Description: User enables accessibility settings such as text-to-speech or font resizing.

Preconditions: User is logged in.

Main Flow:

- The user opens “Accessibility Settings.”
- The system displays available options.
- The user enables text-to-speech or other settings.

Postconditions: Settings are applied to the user interface.

11. **Use Case 11:** View Progress and Insights

Actors: Student User

Description: Displays user’s progress summaries and performance charts.

Preconditions: User has recorded data.

Main Flow:

- The user selects “Progress Dashboard.”
- The system retrieves stored mood and habit data.
- Visual summaries are displayed.

Postconditions: Progress charts are visible and up to date.

12. **Use Case 12:** Compare Progress with Peers (Opt-In)

Actors: Student User

Description: Allows friendly progress comparison among peers (if the user consents).

Preconditions: User opts into comparison mode.

Main Flow:

- The user activates “Peer Comparison.”
- The system aggregates anonymous peer data.
- The user views comparative charts.

Postconditions: Comparison results are displayed securely and anonymously.

13. **Use Case 13:** View Mood and Habit Trends

Actors: Student User

Description: User views long-term correlations between mood and activities.

Preconditions: User has consistent tracking data.

Main Flow:

- The user selects “Trends.”
- The system analyzes mood and habit history.
- Correlations (e.g., sleep vs. mood) are displayed.

Postconditions: User gains insight into personal wellness patterns.

14. **Use Case 14:** Receive Personalized Recommendations

Actors: Student User

Description: The system offers tips and suggestions based on user data.

Preconditions: User has stored tracking data.

Main Flow:

- The user opens “Recommendations.”
- The system analyzes patterns.
- The system generates tailored wellness advice.

Postconditions: Recommendations are displayed to the user.

15. **Use Case 15:** Manage System Content

Actors: Admin

Description: Admin manages app content such as prompts, games, and exercises.

Preconditions: Admin is logged into the management portal.

Main Flow:

- Admin opens "Manage Content."
- The system displays content lists.
- Admin adds, edits, or removes content.

Postconditions: System content is updated for all users.

16. **Use Case 16:** Update YFS Resource Information

Actors: Admin

Description: Admin maintains up-to-date information on YFS wellness resources.

Preconditions: Admin is authenticated.

Main Flow:

- Admin selects "Manage Resources."
- The system displays current listings.
- Admin edits or adds new data.
- The system saves updates.

Postconditions: Updates resources information is available to all users.

17. **Use Case 17:** Manage Users

Actors: Admin

Description: Admin manages users using Reclaim.

Preconditions: Admin is authenticated.

Main Flow:

- Admin selects "Manage Users."
- The system displays current users.
- Admin can remove or add users.
- The system saves updates.

Postconditions: Updates user information.

4. Test Plan and Results

4.1 Requirement-to-Test Case Traceability Matrix

Requirement ID	Requirement Description	Test Case ID	Test Case Description	Coverage	Notes
FR-001	The system shall allow users and admins to create an account using an email and password.	TC-022, TC-023, TC-024, TC-025, TC-026	TC-022: Verify that a new account can be created with a york email and strong password TC-023: Verify that registration with non-York or malformed email is rejected TC-024: verify duplicate registration with same email is prevented TC-025: Verify you can login with valid credentials after registration TC-026: Reject login with incorrect credentials		
FR-002	The system shall allow users to log their mood daily using emoji sliders and short notes.	TC-001, TC-002 and TC-003	TC-001: Verify that a logged-in student can add a new daily mood entry using emoji sliders and short notes successfully. TC-002: Ensure that students can view up to the last 30 recorded daily mood entries in chronological order. TC-003: Confirm that a previous day's mood entry is correctly moved to the "Previous		In future interactions, we may need additional testing for editing a mood entry.

			Entries” section when a new day begins.		
FR-003	The system shall provide guided prompts and a blank journaling area for self-reflection.	TC-004 and TC-005	TC-004: Validate that students can create and save a new journal entry using either a guided prompt or a blank template. TC-005: Ensure students can view a list of their saved journal entries sorted from most recent to oldest.		In future iterations, we may need additional testing to edit or delete journal entries.
FR-004	The system shall enable users to set, track and remind them of their habits (e.g., meditation, sleep, exercise).	TC-006, TC-007 and TC-008	TC-006: Confirm that students can create and save a new habit with custom reminder frequency options. TC-007: Verify that students can update a habit’s status from “In progress” to “Done” and see it reflected in their habit list. TC-008: Ensure that marking a reminder as complete correctly updates the user’s habit progress and streak count.		
FR-005	The system shall offer breathing exercises, time management tips and mindfulness exercises.	TC-010 and TC-011	TC-010: Test that students can access the Wellness Tools section and view available exercises. TC-011: Test that students can mark a wellness		Once the specific implementation of the exercises has been completed, additional test cases will be needed to test them.

			exercise as “Completed” and that its status updates successfully.		
FR-006	The system shall link directly to YFS mental health services.	TC-030	TC-030: Test that the student can access the YFS tools.		
FR-007	The system shall include focus games or habit-streak rewards that encourage consistent engagement.	TC-009	TC-009: Test that students receive a new streak or reward after maintaining a habit consistently for a full week.		
FR-008	The system shall allow users to arrange widgets (mood tracker, habits, reminders) based on their preferences to arrange their dashboard.	TC-031	Verify that users can rearrange widgets on the dashboard.		
FR-009	The system shall provide accessibility options such as text-to-speech.	TC-032	Test that text-to-speech can be activated and read on-screen content.		
FR-010	The system shall show users visual summaries of their mood, habits and activities.	TC-018	TC-18: View Progress Dashboard and charts		
FR-011	The system shall allow friendly comparison of progress among peers if the user opts-in.	TC-019	Test that users can compare progress with peers after opting in.		
FR-012	The system shall display trends over time and correlations (e.g., between sleep and mood).	TC-020	Test that the system shows visual trends and correlations over time.		
FR-013	The system shall offer personalized recommendations based on tracked data.	TC-021	TC-21: Generate personalized recommendations based on user data		

FR-014	The system shall allow admins to modify system content including prompts, exercises, YFS resource information and users.	TC-027, TC-028, TC-029	TC-027:validates that an admin updates a prompt/resource and change is visible to normal users TC-028:Only admins can access Manage Content / Manage Users endpoints TC-029: Validates that admin manages users and can add, remove, and change roles correctly		
NFR-001	The interface shall allow first-time users to complete their first log (mood/journal) in under 2 minutes without external help.	TC-012	Validate that a first-time user can complete their first mood or journal log within 2 minutes without external help.		
NFR-002	System logs shall record all login attempts and data changes with audit retention for 180 days.	TC-013	Verify that all login attempts and data changes are recorded in audit logs retained for 180 days.		
NFR-003	Interface should use no more than 5 primary colours and maintain a minimum 4.5:1 contrast ratio for accessibility compliance (WCAG 2.1 AA).	TC-014	Ensure the interface maintains at least a 4.5:1 colour contrast ratio and uses no more than five primary colours for accessibility compliance.		
NFR-004	The layout shall adapt automatically to screens between 375px and 1440px width (mobile to desktop) and all UI elements must remain fully functional and visible without horizontal scrolling on mobile screens	TC-015	Confirm that the application layout adapts to screens between 375px and 1440px without horizontal		

			scrolling or functional loss.		
NFR-005	The system architecture shall support a 100% increase in concurrent users (up to 1,000 active users) without requiring code changes.	TC-016	Test that the system can handle 1,000 concurrent users without requiring code changes or performance degradation.		
NFR-006	All primary pages (dashboard, journal, resources) shall load within 3 seconds on 10 Mbps Wi-Fi and 5 seconds on 4G mobile data.	TC-017	Measure that all main pages load within 3 seconds on Wi-Fi and 5 seconds on 4G mobile data.		

4.2 Test Cases

Test Case ID	TC-001
Title	Add Daily Mood with valid inputs
Requirement	FR-002
Preconditions	The user is logged in as a Student.
Steps	1. Navigate to the “Mood” page 2. Find the “Daily Mood” section 3. Log your mod with an emoji slider and short notes 4. Click “save”
Expected Result	The “Daily Mood” section is saved and marked as “Completed.”
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-002
Title	View previous Mood entries

Requirement	FR-002
Preconditions	The user is logged in as a Student and has completed the “Daily Mood” section at least one day before.
Steps	1. Navigate to the “Mood” section 2. Under the “Daily Mood” section, previous mood entries are visible with the date they were completed
Expected Result	The last 30 previous mood entries are visible and up to date.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-003
Title	The Daily Mood is added to the previous entries section the next day
Requirement	FR-002
Preconditions	The user is logged in as a Student and has completed the “Daily Mood” section the day before.
Steps	1. Navigate to the “Mood” section
Expected Result	The “Daily Mood” section is empty and incomplete because it is a new day. In addition, the mood entry from yesterday is added to the list of previous entries.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-004
Title	Add a new Journal Entry with valid inputs
Requirement	FR-003
Preconditions	The user is logged in as a Student.
Steps	1. Navigate to “Journal” 2. Click “Add new Journal Entry” 3. Choose “Use Guided Prompt” or “Start with Blank

	Entry” 4. Fill our journal with guided prompt 5. Click “Save”
Expected Result	The journal entry is added and the list of previous journal entries is updated.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-005
Title	View previous journal entries
Requirement	FR-003
Preconditions	The user is logged in as a Student and has completed at least one journal entry.
Steps	1. Navigate to “Journal”
Expected Result	The previous journal entries are visible and ordered in descending order of date (from the most recent to oldest).
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-006
Title	Create new Habits with valid inputs
Requirement	FR-004
Preconditions	The user is logged in as a Student.
Steps	1. Navigate to “Habits” 2. Click on “Add New Habit” 3. Fill out how you would like to receive Reminders (daily, weekly, bi-weekly or monthly) 4. Click “Save”
Expected Result	The habit is added and the list of current habits is updated.
Actual Result	(To be filled after test execution)

Status	(Pass/Fail)
Priority	High

Test Case ID	TC-007
Title	Change the status of the habit
Requirement	FR-004
Preconditions	The user is logged in as a Student and has created at least one habit.
Steps	1. Navigate to "Habits" 2. Find the list of your current habits and choose one to change the status 3. Change the status from "In progress" to "Done"
Expected Result	The habit's status has been updated and the habit has been removed from the list of current habits.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-008
Title	Record the progress of a Habit
Requirement	FR-004
Preconditions	The user is logged in as a Student and has created at least one habit.
Steps	1. Navigate to "Habits" 2. Click "Reminders" 3. Mark a reminder as "Complete" to indicate that the habit has been completed for the day
Expected Result	The habit's progress has been updated and the progress of the streak has been recorded.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-009
Title	Receive rewards when a habit has completed a streak
Requirement	FR-007
Preconditions	The user is logged in as a Student and has kept up with a habit for at least a week.
Steps	2. Navigate to "Journal" 3. Click "Streaks" 4. View a new streak for your habit
Expected Result	There is a new streak for completing a habit everyday for a week.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-010
Title	View Wellness Tools
Requirement	FR-005
Preconditions	The user is logged in as a Student.
Steps	4. Navigate to "Wellness Tools" 5. Click on an exercise
Expected Result	The user can access the Wellness Tools section and the available exercises.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-011
Title	Change the status of a wellness exercises
Requirement	FR-005
Preconditions	The user is logged in as a Student.
Steps	1. Navigate to "Wellness Tools"

	- Click on an exercise and complete it - Mark the status as "Completed"
Expected Result	The status of the wellness exercise is updated.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-012
Title	Verify first-time users can complete their first log in under 2 minutes
Requirement	NFR-001
Preconditions	The user is logged in as a Student for the first time.
Steps	- Start a timer - Navigate to the "Mood" or "Journal" section - Complete the first mood log or journal entry - Stop the timer once the entry is successfully saved
Expected Result	The user is able to complete and save their first log within 2 minutes without requesting help or external instructions.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-013
Title	Verify audit logs record login attempts and data changes with 180-day retention
Requirement	NFR-002
Preconditions	Logging functionality is enabled and Admin access is available to review audit logs.
Steps	- Attempt a successful login and a failed login - Make a data change (e.g., update a journal entry) - Access the system audit logs as an admin - Verify that all actions are recorded with timestamps and user IDs - Check that retention settings delete or archive logs older than 180 days

Expected Result	All login attempts and data modifications are logged accurately with timestamps, and logs older than 180 days are automatically purged or archived.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Low

Test Case ID	TC-014
Title	Verify accessibility colour contrast and visual design compliance
Requirement	NFR-003
Preconditions	Application UI is deployed and accessible via browser.
Steps	1. Open the app on a desktop browser 2. Use a contrast checker tool (e.g., WCAG contrast ratio checker) 3. Measure the contrast between text and background for all major elements 4. Count the number of primary colours used in the interface
Expected Result	No more than 5 primary colours are used and all text and UI elements have at least a 4.5:1 contrast ratio.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-015
Title	Verify responsive layout for multiple screen sizes
Requirement	NFR-004
Preconditions	The application is accessible on mobile (375px), tablet (~768px), and desktop (1440px) devices.
Steps	1. Open the app on devices with 375px, 768px, and 1440px widths 2. Navigate through all main pages 3. Verify that no horizontal scrolling is required on mobile screens 4. Ensure all buttons and menus are fully visible and

	functional on each screen size
Expected Result	Layout automatically adapts between 375px and 1440px, no horizontal scrolling occurs on mobile and all elements remain functional and visible.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-016
Title	Verify system scalability to handle 1,000 concurrent users
Requirement	NFR-005
Preconditions	A load testing tool is configured and the baseline system supports at least 500 concurrent users.
Steps	1. Simulate 1,000 concurrent users performing login, journaling, and navigation actions 2. Monitor system CPU, memory, and response times 3. Observe any failures or slowdowns.
Expected Result	The system continues to operate normally under 1,000 concurrent users without requiring code changes, maintaining response times and availability.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-017
Title	Verify page load times under Wi-Fi and 4G conditions
Requirement	NFR-006
Preconditions	A network throttling tool is available and the application is deployed on a test server.
Steps	1. Simulate a 10 Mbps Wi-Fi connection 2. Load main pages 3. Measure time to full content load 4. Repeat on a 4G mobile connection (average 5–10 Mbps)
Expected Result	Each primary page loads within 3 seconds on Wi-Fi and 5 seconds on 4G mobile data.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-018
Title	View Progress Dashboard and charts display
Requirement	FR-010
Preconditions	The user is logged in as a Student and has at least one week of recorded mood and habit data.
Steps	1. Navigate to “Progress Dashboard” 2. Wait for the dashboard to load 3. Observe the mood, habit and activity charts displayed
Expected Result	The Progress Dashboard successfully loads and displays accurate visual summaries of the user’s mood and habit data using bar and line charts.
Actual Result	(To be filled after test execution)

Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-019
Title	Compare progress with peers using anonymized data
Requirement	FR-011
Preconditions	The user is logged in as a Student and has opted-in to the peer comparison feature.
Steps	1. Navigate to "Progress Dashboard" 2. Select the "Peer Comparison" option 3. View the displayed comparison chart
Expected Result	The system displays comparative progress results between the user and peers without showing any personal or identifiable data.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-020
Title	View mood and habit trend correlations
Requirement	FR-012
Preconditions	The user is logged in as a Student and has at least 10 days of tracked mood and habit data.
Steps	1. Navigate to "Trends"

	- Choose a category such as "Sleep vs. Mood" - Observe the generated correlation chart
Expected Result	The system correctly analyzes mood and habit history and displays a visual correlation chart showing the relationship between selected variables.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-021
Title	Generate personalized recommendations based on user data
Requirement	FR-013
Preconditions	The user is logged in as a Student and has at least two weeks of activity and tracking data.
Steps	- Navigate to "Recommendations" - Review the displayed wellness tips
Expected Result	The system analyzes stored data and presents tailored wellness suggestions relevant to the user's recorded mood and habit history.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-022
---------------------	---------------

Title	Register new user with valid York email and password
Requirement	FR-001
Preconditions	- Registration page is reachable - Database is available - No existing account with that email.
Steps	1. Open Sign Up form. 2. Enter valid York email (e.g., student@yorku.ca), first name, username. 3. Enter valid password meeting policy (e.g., 8+ chars, includes number). 4. Submit form.
Expected Result	Account created, user receives confirmation (UX message), user record stored in DB with hashed password, and user can log in.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-023
Title	Reject registration with non-York or malformed email
Requirement	FR-001
Preconditions	Sign up available
Steps	- Open Sign Up form. - Enter invalid email formats (e.g., user@@yorku, user@gmail) and a non-York email - Fill other required fields and submit.

Expected Result	Registration rejected with clear validation errors
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-024
Title	Prevent duplicate registration with same email
Requirement	FR-001
Preconditions	An existing user account with the test email in DB.
Steps	1. Attempt to register another account using the same email. 2. Submit form.
Expected Result	Registration is blocked; the user gets an error that email already exists. No new account created.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-025
Title	Login with valid credentials after registration
Requirement	FR-001
Preconditions	User account exists in DB

Steps	1. Open Login page. 2. Enter registered email and password. 3. Submit.
Expected Result	User authenticated and redirected to homepage
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-026
Title	Reject login with incorrect credentials
Requirement	FR-001
Preconditions	User account exists
Steps	Attempt login with wrong password.
Expected Result	Authentication fails with proper error
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-027
Title	Admin updates a prompt/resource and change is visible to normal users
Requirement	FR-014

Preconditions	Admin account exists and is logged in; at least one normal user account exists; resource/prompt exists.
Steps	1. Admin logs in and navigates to Manage Content or Manage Resources. 2. Select an existing prompt or YFS resource entry. 3. Edit text/content and save changes. 4. As a normal user, navigate to the same resource/prompt view or refresh the public listing.
Expected Result	Admin save returns success; updated content is stored in DB and immediately visible to normal users (or after refresh)
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-028
Title	Only admins can access Manage Content / Manage Users endpoints (authorization test)
Requirement	FR-014
Preconditions	Admin account and normal user account exist; protected admin endpoints exist.
Steps	1. Attempt to access Manage Content / Manage Users UI and backend endpoints while logged in as a normal user. 2. Attempt the same access while unauthenticated. 3. Attempt the same while logged in as an admin.
Expected Result	Normal users and unauthenticated requests are denied

	(403/redirect). Admin requests succeed. No unauthorized modifications allowed.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-029
Title	Admin manages users: add, remove, and change roles correctly
Requirement	FR-014
Preconditions	Admin logged in; user accounts exist.
Steps	1. Admin navigates to Manage Users. 2. Add a new user (or create via admin) and confirm account creation. 3. Change an existing user's role to admin and verify they gain admin privileges. 4. Remove a user and verify they can no longer log in.
Expected Result	User additions, role changes, and deletions persist in DB; role change grants admin UI access; deleted users cannot authenticate
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-030
---------------------	---------------

Title	Access YFS Tools
Requirement	FR-006
Preconditions	The student is logged in.
Steps	1. Navigate to “Resources” 2. Click “YFS Health Services”
Expected Result	The user is taken to the information page on the YFS website about health services.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	High

Test Case ID	TC-031
Title	Verify that users can rearrange widgets on the dashboard
Requirement	FR-008
Preconditions	The student is logged in.
Steps	1. Navigate to the dashboard 2. Click and hold a widget (e.g., mood tracker) 3. Drag it to a new position 4. Release to drop in the new spot 5. Refresh the page
Expected Result	Widgets remain in the new arrangement even after refresh

	or relogin.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

Test Case ID	TC-032
Title	Verify that text-to-speech can be activated and read on-screen content
Requirement	FR-009
Preconditions	The student is logged in.
Steps	1. Navigate to any text-based section (e.g., journal entry) 2. Click the “Text-to-Speech” button 3. Observe if the system reads the visible text aloud
Expected Result	The system reads the text clearly and accurately without delay.
Actual Result	(To be filled after test execution)
Status	(Pass/Fail)
Priority	Medium

5. Updated Iteration Plan

Fall Term:

Iteration 1 (Weeks 1-2: Initial Vision and Planning) - COMPLETED

In iteration 1, we will set up the initial vision document as well the GitHub repository with an organized outline in the README. In this step Justin will create the repository and README, while Brianna, Ruqayya, and Kieran complete the vision board.

Iteration 2 (Weeks 3-5: Requirements and User Stories) - COMPLETED

After getting the feedback from stakeholders, we will re-evaluate and modify our plan if needed. Together, we will write the detailed user stories and work on the use case diagrams, aiming to complete this within the first week. Brianna and Justin will tackle the Functional and Non-Functional Requirements Document, while Kieran and Ruqayya update the feature backlog during the last 2 weeks.

Iteration 3 (Weeks 6-9: Initial Development and Testing) - UPDATED & COMPLETED

Week 6: Redefine functional and non-functional requirements, apply feedback from previous deliverable and mock up initial prototype design

- Ruqayya and Justin will update our non-functional requirements to be more quantitative and redesign our iteration plan to be more clear based on our last feedback
- Brianna and Kieran will mock up UI designs for the initial prototype on Figma
- Throughout the week, the team will work together to give feedback on the UI design and iteratively improve the initial prototype design

Week 7: Develop testing plan and test cases

- Brianna will map capture our user stories and requirements into GitHub issues
- Justin create a new Github project for us to add and track the status of our issues
- We will develop a testing plan and each individual will write test cases for the following functionalities:
 - Ruqayya will write the test cases for the authentication and core systems foundations - creating an account, logging in and managing users on the admin side
 - Brianna will write the test cases for the core wellness features - tracking mood, habits, journal entries and accessing wellness tools
 - Kieran will write the test cases for the insights, analytics and focus games - building focus games, viewing progress and insights, comparing progress

with peers, analyzing mood and habit trends and receiving personalized recommendations

- Justin will write test cases for the admin tools, customization and accessibility features - viewing York University resources, customizing the dashboard, enabling accessibility options, managing system content and updating YFS tools on the admin access

Week 8: Begin developing initial prototype

- The team will begin to develop the initial prototype of the application. Each member is responsible for the features they wrote the test cases for:
 - Ruqayya - authentication and core system foundation
 - Brianna - core wellness tracking features
 - Kieran - insights, analytics and gamification
 - Justin - admin tools, customization and accessibility
- Each member will add their respective test cases to the Deliverable 2.1 document
- Kieran will add screenshots of the initial mock up of the prototype to the document
- Ruqayya and Justin will add the updated functional and non-functional requirements to the document
- Brianna will organize the traceability matrix for the test plan in the document

Iteration 4 (Weeks 10-12: Mid Project Peer Review and Iteration) - UPDATED

Week 10: Complete all core functional requirements and update requirements based on TA feedback

- Ruqayya and Justin will update the functional and non-functional requirements based on the feedback we receive in Deliverable 2.2
- Each member should complete **at least 50%** of the requirements they are assigned in order to prepare for submitting the project for peer reviews next week. The following requirements should be prioritized:
 - Ruqayya - creating an account and logging into the account
 - Brianna - allowing students to track their mood and journal entries
 - Kieran - building at least 2 focus games and creating a section for students to view their progress and insights
 - Justin - implementing a section for YFS resources and accessibility tools

Week 11: Complete prototype and submit project for Peer Reviews

- All functional requirements and core functionality should be complete **by November 21st (by the latest)**
- Review our completed prototype before submitting the project for Peer Reviews **by November 22nd**
- Submit project for Peer Reviews **by November 23rd**

Week 12: Refine prototype and assemble document for Deliverable 2.2

- Complete a review for another group **by November 30th**
- Discuss feedback from Peer Reviews if available and if there is anything to refine

- Assemble and submit document for Deliverable 2.2
 - Ruqayya and Justin will add the updated functional and non-functional requirements to the document
 - Brianna will update our testing document with test cases and results and add it to the document
 - Kieran will add screenshots of our working prototype to the document

Winter Term:

To be updated and outlined once the document including the instructions of the deliverables for the winter term are available.
