1 INTRODUCTION	3
2 SOFTWARE REQUIREMENTS SPECIFICATION (SRS)	3 - 5
3 SOFTWARE DESIGN DOCUMENT (SDD)	6 - 12
4 TESTING DOCUMENTATION	13 - 14
5 USER MANUAL	15 - 31

1. INTRODUCTION

Course: DIGT2107 – Fall Term 2025

Instructor: Dr. May Haidar

Due Date: March 29, 2026

Project name: Reclaim

Team number: Group 4

Team members: Brianna Nguyen, Justin Gamez, Kieran Bendell, Ruqayya Naqvi

GitHub repository: <https://github.com/justingmz77/Reclaim>

2. SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

2.1 Introduction

Purpose

The purpose of this document is to define the functional and non-functional requirements for the Reclaim web application.

Scope

Reclaim is a web application designed to support university students in managing their mental health. It provides wellness tools, integrated resources, and personalized dashboards to help users track their mood, build healthy habits, and access support resources.

2.2 System Overview

Reclaim is a web application designed for York University students to raise awareness of campus mental health resources and improve overall wellness. The application enables users to track their mood, build habits, journal, play wellness-related games, and complete guided exercises. The system was built using HTML, CSS, and JavaScript for the frontend, and Node.js for the backend.

Reclaim supports two user roles: student and admin. Student users can create accounts to access all wellness features. Admin users are responsible for managing and updating application content (e.g., resources and exercises) without requiring developer intervention.

2.3 Functional Requirements

Functional Requirement	Description
FR-001	The system shall allow users and admins to create an account using an email and password.
FR-002	The system shall allow users to log their mood daily using emoji sliders and short notes.
FR-003	The system shall provide guided prompts and a

	blank journaling area for self-reflection.
FR-004	The system shall enable users to set, track and remind them of their habits (e.g., meditation, sleep, exercise).
FR-005	The system shall offer breathing exercises, time management tips and mindfulness exercises.
FR-006	The system shall link directly to YFS mental health services.
FR-007	The system shall include focus games or habit-streak rewards that encourage consistent engagement.
FR-009	The system shall provide accessibility options such as text-to-speech.
FR-014	The system shall allow admins to modify system content including prompts, exercises, YFS resource information and users.

2.4 Non-Functional Requirements

Non-Function Requirement	Description
NFR-001	The interface shall allow first-time users to complete their first log (mood/journal) in under 2 minutes without external help.
NFR-002	System logs shall record all login attempts and data changes with audit retention for 180 days.
NFR-003	Interface should use no more than 5 primary colours and maintain a minimum 4.5:1 contrast ratio for accessibility compliance (WCAG 2.1 AA).
NFR-004	The layout shall adapt automatically to screens between 375px and 1440px width (mobile to desktop) and all UI elements must remain fully functional and visible without horizontal scrolling on mobile screens
NFR-005	The system architecture shall support a 100% increase in concurrent users (up to 1,000 active users) without requiring code changes.
NFR-006	All primary pages (dashboard, journal, resources) shall load within 3 seconds on 10 Mbps Wi-Fi and 5 seconds on 4G mobile data.

2.5 Changes to Requirements

Requirement	Description of requirement	Change
FR-008	The system shall allow users to arrange widgets (mood tracker, habits, reminders) based on their preferences to arrange their dashboard.	This feature was not a core feature of the system, therefore we decided to consider this feature as a future enhancement.
FR-010	The system shall show users visual summaries of their mood, habits and activities.	On the dashboard, it shows a high level “Wellness Overview” of the user’s mood entries, active habits and the habits completed today. However, the initial requirement involved more visual summaries with graphs or charts.
FR-011	The system shall allow friendly comparison of progress among peers if the user opts-in.	This feature was not a core feature of the system, therefore we decided to consider this feature as a future enhancement.
FR-012	The system shall display trends over time and correlations (e.g., between sleep and mood).	This feature was not a core feature of the system, therefore we decided to consider this feature as a future enhancement.
FR-013	The system shall offer personalized recommendations based on tracked data.	This feature was not a core feature of the system, therefore we decided to consider this feature as a future enhancement. If this feature were to be implemented, we would also integrate AI to offer personalized recommendations.

3. SOFTWARE DESIGN DOCUMENT (SDD)

3.1 Design Overview

The Reclaim system is a full-stack web application designed to support student mental health and daily routine management. The system integrates multiple wellness tools into one platform, including mood tracking, journaling, habit tracking, wellness tools, and access to university resources.

The system follows a client-server architecture consisting of:

- A **frontend layer** responsible for user interaction and interface rendering
- A **backend layer** responsible for application logic, authentication, and API handling
- A **database layer** responsible for persistent data storage

Two user roles are supported:

- **Student Users:** Access wellness features and track personal data
- **Admin Users:** Manage system content, resources, and users

The dashboard aggregates all system data and provides a centralized summary of user activity.

3.2 System Architecture

Figure 1: System Architecture Diagram

The frontend communicates with the backend through API calls. The backend processes requests, handles authentication, and interacts with the database to store and retrieve data.

This architecture supports scalability and allows new features to be added without major structural changes

3.2 Data Design

The system is built around several core data entities:

User

- userId
- email
- password
- role (student/admin)
- accessibility settings

MoodEntry

- entryId
- userId
- mood value (emoji)
- notes
- timestamp

JournalEntry

- entryId
- userId
- title
- content
- timestamp

Habit

- habitId

- userId
- name
- frequency
- completion status
- streak

Game/Progress Data

- userId
- reward points
- streak progress

These entities are linked using relational mappings (e.g. one user to many journal entries), enabling efficient storage and retrieval.

3.4 UML Diagrams

3.4.1 Class Diagram

Figure 2: Class Diagram of Reclaim System

This diagram shows relationships between users and their data. A single user can have multiple mood entries, journal entries, and habits.

3.4.2 Sequence Diagram (Journal Entry)

Figure 3: Sequence Diagram for Journal Entry Feature

This diagram shows the interaction flow from user input to data storage and UI update.

3.4.3 Activity Diagram (Habit Tracking)

Figure 4: Activity Diagram for Habit Tracking

This diagram represents the flow of user actions and system responses during habit tracking.

3.5 Feature Design and Requirement Mapping

Each system component directly supports the functional requirements defined in the SRS.

- **Authentication module** → supports account creation and login
- **Mood tracking module** → supports daily mood logging and history

- **Journaling module** → supports guided and free-form entries
- **Habit tracking module** → supports habit creation, completion, and streak tracking
- **Dashboard module** → supports visualization of user activity
- **Resources module** → provides access to university support services

These features align with the system requirements for tracking wellness, providing tools, and offering insights to users

3.6 Detailed Feature Design

Authentication

Handles user registration, login, and session management. Ensures secure access to user data.

Mood Tracking

Allows users to log daily mood using emojis and optional notes. Data is stored and displayed in historical format.

Journaling System

Users can write entries using prompts or free text.

Flow:

- Load previous entries
- Accept user input
- Validate input and authentication
- Store entry
- Update UI

Habit Tracking

Users create habits, mark completion, and track streaks. The system updates progress dynamically.

Dashboard

Displays summaries of:

- Mood entries
- Habit progress
- Daily activity

Wellness Tools & Resources

Includes:

- Mindfulness exercises
- Time management tools
- University mental health resources

This aligns with the project goal of improving student wellness and awareness

3.7 Non-Functional Design Considerations

The system meets key non-functional requirements:

- **Usability:** Simple interface with minimal learning curve
- **Performance:** Pages load within ~3 seconds
- **Responsiveness:** Works across mobile, tablet, and desktop
- **Security:** User data is protected and separated
- **Accessibility:** Includes text-to-speech, colour modes, and adjustable text

3.8 Final Design Adjustments (Post-Implementation)

Several improvements were made after testing and implementation:

- Improved responsive navigation for mobile devices
- Added accessibility settings (text size, colour modes, text-to-speech)
- Fixed journal and mood data separation issues

- Refactored code for better maintainability

These changes improved reliability, usability, and system performance

4. TESTING DOCUMENTATION

Testing Overview

Reclaim uses a three-tier testing strategy covering unit tests, integration tests, and end-to-end (E2E) tests. Unit tests validate isolated business logic, integration tests verify the full HTTP API stack, and

E2E tests simulate real user interactions in a browser. All tests reside in the tests/ directory and are executed through a custom test runner (bin/test.js) that provides unified output for both Jest and Playwright suites.

Test Environment and Tools

Frameworks:

- Jest
- Playwright
- Supertest

Custom Test Runner (bin/test.js)

- Live progress bars with pass/fail counts
- Consolidated summary across both frameworks
- Failure reporting with file/test name and error excerpts
- Support for targeting individual test files

Unit Tests

Unit tests were written to verify the core logic of the application in isolation. This included the authentication module (email validation, password rules, YorkU domain enforcement) and all five database modules: Users, MoodEntries, JournalEntries, GameScores, and Habits. Each module was tested for its full CRUD lifecycle, adding, retrieving, updating, and deleting records, as well as edge cases like duplicate entries, invalid inputs, missing users, and foreign key constraints. The database schema itself was also validated to confirm that all tables, columns, and indexes were created correctly. Authentication logic reached 100% coverage. The database utilities averaged 82% line coverage.

Integration Tests

Integration tests were written to verify that the server routes behave correctly end-to-end, from HTTP request to database response. This covered the authentication routes (signup, login, logout), mood and journal entry routes, game score submission and leaderboard retrieval, and the full admin API including user management (list, create, update role, delete). Each route was tested for both happy-path and error-path scenarios, for example, confirming that a student receives a 403 when attempting to access admin-only routes, and that unauthenticated requests are rejected with a 401. The server reached 82.6% statement coverage, with the uncovered lines primarily being error branches that are only reachable under extreme database failure conditions.

End-to-End Tests

End-to-end tests were written using Playwright to simulate real user interactions in a browser. These tests covered the full user journey across the major features of the app: signing up with a YorkU email, logging in, tracking a mood entry, writing a journal entry, using the wellness tools, playing games, and navigating the admin panel. Admin content management was tested thoroughly, creating, editing, and deleting journaling prompts, exercises, and game entries, as well as access control, confirming that students are blocked from admin pages and that content changes made through the admin panel are immediately reflected in the public API. A total of 7 E2E spec files were written, targeting the features most directly affected by the changes in this iteration.

Test Results Summary

All test suites passed following final integration and regression testing.

FILE	% STMTS	% BRANCH	% FUNCS	% LINES
ALL FILES	83.04	86.56	95.89	82.94

5. USER MANUAL

A complete end user guide:

5.1 Introduction

Purpose of the Software

Reclaim is a web-based mental health and wellness platform built specifically for York university students. Its core purpose is to help students manage– academic stress, track their emotional well-being, build sustainable healthy habits, and share university mental health resources, all from a single and easy-to-use interface.

The app addresses one of the most pressing challenges in higher education: students who struggle to maintain mental wellness while balancing coursework, employment, and personal responsibilities. Reclaim centralizes wellness tracking so that users can access insights and progress about their own patterns, gain awareness and take back their time.

Target Audience

Reclaim is designed for the following users:

Audience	Description
Students	York University students seeking to track mood, build habits, journal, and access wellness tools. No technical knowledge required.
Administrators	Staff or faculty with admin-level accounts who manage content, user accounts, and platform settings.

4.1.3 Overview of Key Features

Reclaim provides the following core features:

- Mood Tracker - Log your daily emotional state with emoji-based mood selection, optional notes, and history review
- Habit Tracker - Create, track, and maintain healthy habits with streak counters and completion history visualizations
- Journal - Write personal journal entries using free-form writing or guided prompts
- Wellness Tools - Complete guided breathing exercises and mindfulness activities with completion tracking
- Focus Games - Play games like Brick Breaker and Solitaire to take mindful breaks; scores save to personal leaderboards
- School Resources - view York university's student resources
- Dashboard - View a personal overview of mood entries, active habits, and daily completion stats

- Admin Panel - Manage platform content (prompts, exercises) and user accounts (admin accounts only)

Reclaim works entirely in your web browser - no app download is required.

All data is private to your account. Other users cannot see your entries.

5.2 Installation and Setup Instructions

System Requirements

Before getting started, ensure your system meets the following requirements:

Requirement	Details
Operating System	Windows 10+, macOS 10.15+, Ubuntu 20.04+, or any modern OS
Web Browser	Google Chrome 90+, Firefox 90+, Safari 14+, or Edge 90+ (recommended: Chrome)
Internet Connection	Required for initial setup and data sync; local network access sufficient for local deployment
Node.js (Developers)	Node.js v20 or higher
Email	A valid @my.yorku.ca email address is required to register

Accessing Reclaim (Web Version, currently not deployed)

If your institution or instructor has deployed Reclaim on a server, simply navigate to the provided URL in your web browser. No installation steps are needed for end users.

1. Open your preferred web browser (Chrome or Firefox recommended).

2. Navigate to the Reclaim URL provided by your instructor or system administrator.
3. You will be directed to the Login page. Proceed to instructions on how to create an account.

Local Installation (Developers / Self-Hosting)

Follow these steps to run Reclaim on your local machine for development or self-hosted deployment:

Step 1 -Install Prerequisites

- Download and install Node.js v20+ from nodejs.org
- Confirm installation by running `node --version` in your terminal

Step 2 -Clone or Download the Project

- If using Git: run `git clone <repository-url>` in your terminal
- If using a ZIP file: extract the archive to a folder of your choice

Step 3 -Install Dependencies

Open a terminal in the project root folder and run:

```
npm install
```

This installs all required packages including Express, bcrypt, and better-sqlite3

Step 4 -Seed the Database

To populate the database with sample data, run:

```
npm run seed
```

To start fresh (drop and re-seed all data), run:

```
npm run seed:fresh
```

Step 5 -Start the Server

Launch the application with:

```
npm start
```

The server will start on `http://localhost:3000`

For development with auto-reload, use:

```
npm run dev
```

Step 6 -Open in Browser

- Open your browser and navigate to: <http://localhost:3000>
- You should see the Reclaim login page. Your installation is complete.

Creating Your Account

All users must register with a York University email address (@my.yorku.ca).

1. Click Sign Up on the login page or navigate to </signup.html>.
2. Enter your YorkU email address (must end in @my.yorku.ca).
3. Create a strong password that meets all of the following requirements:
 - At least 8 characters long
 - Contains at least one uppercase letter (A–Z)
 - Contains at least one number (0–9)
 - Contains at least one special character (! @ # \$ % ^ & *)
4. Re-enter your password in the Confirm Password field.
5. Click Create Account. You will be automatically redirected to your Dashboard.

Account Types

Only student accounts can be created through the sign-up page.

Administrator accounts must be created by a developer using the admin setup tools.

If you need admin access, contact your system administrator.

Logging In

9. Navigate to the login page at </login.html>.
10. Enter your registered @my.yorku.ca email address.
11. Enter your password and click Log In.
12. You will be redirected to your personal Dashboard.

If you see an error message saying the user does not exist, you may need to sign up first. If you have forgotten your password, contact your administrator for assistance.

5.3 User Interface Guide

This section describes the main screens and navigation elements of Reclaim, including layout descriptions, annotated feature locations, and navigation guidance.

Navigation Bar:

The navigation bar appears at the top of every page and provides access to all major sections of Reclaim.

Nav Element	Description & Location
Reclaim Logo	Center of the header, click to return to the homepage
Home	Links to the main homepage with the Mood Tracker
Wellness Dropdown	Expands to show: Mood Tracker, Habits, Journal, Wellness Tools
Resources	Links to the Resources section with wellness support information
Games	Links to the Games page

Login/Sign Up	Links to Login or Signup
Account Dropdown	Appears when logged in. Expands to show: Dashboard, Accessibility, Logout
Hamburger Icon	Appears on mobile screens, tap to expand the full navigation menu

Dashboard Screen

The Dashboard is your personal wellness command center. It is the first screen you see after logging in.

Screen Layout (top to bottom):

- Welcome Header - Displays your YorkU email address to confirm you are logged in
- Quick Access Cards - Three cards linking to Mood Tracker, Habits, and Resources

- Habit Reminders Card - Set a daily reminder time to check in on your habits
- Admin Card (admin only) - Visible only to admin users; links to the content management panel
- Wellness Overview Section - Shows three statistics: Mood Entries count, Active Habits count, Completed Today count

Understanding Your Stats

Dashboard Stat: 'Mood Entries' -Total mood logs submitted in the past 30 days

Dashboard Stat: 'Active Habits' -Number of in-progress habits you have created

Dashboard Stat: 'Completed Today' -Habits you have marked complete today

Home / Mood Tracker Screen

The homepage (index.html) contains the primary Mood Tracker and a Resources section.

Screen Sections:

- Mood Selector - Five emoji buttons labeled: Great 😊, Good 😊, Okay 😐, Not Good 😞, Terrible 😞
- Notes Field - Optional text area below the mood buttons for adding context
- Save Mood Entry Button - Disabled until a mood is selected; turns active when a mood is clicked
- Success Message - Green confirmation banner appears briefly after saving
- Mood History Grid - Shows your last 6 mood entries with date, mood, and notes
- Support Resources - Four resource cards linking to YFS, Good2Talk, Counselling, and Workshops

Habits Screen

The Habits page (habits.html) is divided into four main areas:

- Create New Habit Form (top) - Input fields for habit name, optional description, and reminder frequency
- Your Current Habits Grid - Cards showing all active (in-progress) habits with action buttons
- Completed Habits Grid - Cards for habits you have marked as 'Done'
- Streaks & Rewards Section - Visual streak cards with contribution graphs (similar to GitHub's activity graph)

Each habit card shows: habit name, reminder frequency badge, optional description, current streak count, completion status for today (✅ or ❌), and action buttons.

Journal Screen

The Journal page (journal.html) provides two journaling modes:

- Guided Journaling - Click 'Guided Journaling with a Prompt' to reveal prompt buttons. Each button pre-fills the journal text area with a structured reflection question.
- Free Journaling - Click 'Free Journaling' to clear any prompt and write freely in the text area.

Below the writing area, Recent Journal Entries displays your past entries with date, title, and content preview.

The page ends with the York Support Resources, linking to YFS, Good2Talk, Counselling, and Workshops

Wellness Tools Screen

The Wellness Tools page displays four guided wellness activity cards arranged in a responsive grid:

- 4-7-8 Breathing - A breathing reset exercise

- Name 5 Grounding Exercise - A mindfulness grounding technique
- Pomodoro with Mindful Pauses - A focus-and-rest study technique
- Mindful Walking - A walking mindfulness exercise

Each card includes a 'Mark Complete' button. After clicking, the button changes to 'Completed Today' and turns gray. A confetti animation plays as a celebratory reward. Your daily streak and total completion count are shown on each card.

Games Screen

The Games page (games.html) shows a grid of all available and upcoming games:

- Brick Breaker (available) - Click 'Play Now' to open the game in its own page
- Solitaire (available) - Click 'Play Now' to open Klondike Solitaire
- Tetris, Snake, Memory Match, Minesweeper - Shown as 'Coming Soon' cards

For available games, logged-in users see a 'Personal Best' score and the game's difficulty level on each card.

Accessibility Settings

Click the purple accessibility button (🔗) in the bottom-right corner of any page, or through Account > Accessibility in the navbar when logged in to open the Accessibility Settings panel.

Available options:

- Text Size - Choose Normal, Large, or Extra Large
- Color Mode - Switch between Default, High Contrast, or Dark Mode
- Text to Speech - Toggle to enable read-aloud; then use the 'Read Page' button to hear page content
- Reset to Defaults - Clears all accessibility settings back to default

5.4 Core Features Instructions

1) Tracking Your Daily Mood

Use the Mood Tracker to log how you are feeling each day. You can only log one mood per day; if you log again on the same day, it will update your earlier entry.

1. Navigate to the Home page (click 'Home' in the navigation).
2. Scroll to the 'How are you feeling today?' section.
3. Click the emoji button that best represents your current mood.
4. (Optional) Type a note in the text area below to add context or reflect on your day.
5. Click 'Save Mood Entry.' The button is only active after selecting a mood.
6. A green confirmation banner will appear briefly confirming the save.
7. Your entry immediately appears at the top of the Recent Mood Entries history.

One Mood Per Day

If you already logged a mood today and log again, your previous entry is updated, not duplicated. The history will always show one entry per day.

2) Creating and Managing Habits

Habits are recurring activities you want to build into your routine. Reclaim tracks your streaks and shows a visual history of your completions.

Creating a New Habit:

1. Navigate to the Habits page via the Wellness dropdown.
2. In the 'Create New Habit' form at the top, enter a descriptive Habit Name (e.g., '30 minutes of exercise').
3. (Optional) Add a Description to remind yourself of your goal.
4. Select a Reminder Frequency from the dropdown: Daily, Weekly, Bi-weekly, or Monthly.
5. Click 'Add Habit.' The habit will appear immediately in the 'Your Current Habits' section.

Marking a Habit Complete Today:

1. Find the habit card in the 'Your Current Habits' section.
2. Click the green 'Mark Complete' button on the card.
3. The button changes to 'Completed!' and becomes disabled for the rest of the day.
4. Your streak counter increments by 1. If you broke a streak (missed yesterday), the streak resets to 1.
5. Milestone streaks (1, 7, 14, 30, 60, 90, 180, 365 days) will trigger a congratulatory pop-up notification!

Marking a Habit as Done (Completed Goal):

1. Click 'Mark as Done' on any active habit card to move it to the Completed Habits section.
2. Done habits are displayed separately and cannot be marked complete daily. They can be deleted.

Deleting a Habit:

1. Click the red 'Delete' button on any habit card (active or completed).
2. A confirmation dialog will appear - click OK to permanently delete the habit and all its history.

How Streaks Work

Streaks are calculated based on consecutive daily completions. If you complete a daily habit every day for 7 days without missing one, you earn a 7-day streak badge.

3) Writing Journal Entries

The Journal allows you to capture your thoughts, emotions, and daily reflections. Entries are private to your account.

Writing a Free Journal Entry:

1. Navigate to the Journal page via the Wellness dropdown.
2. Click 'Free Journaling' to enter open-ended writing mode.
3. (Optional) Enter a title in the Journal Title field at the top of the writing area.
4. Type your thoughts in the main text area.
5. Click 'Save Journal Entry' (button becomes active once you start typing).
6. A confirmation message 'Journal entry saved!' will appear briefly.
7. Your entry appears at the top of the Recent Journal Entries section below.

Using Guided Prompts:

1. Click 'Guided Journaling with a Prompt' to reveal the prompt buttons.
2. Click any prompt button (e.g., 'Prompt 1: Self-Reflection ') to auto-fill the text area with a reflection question.
3. Edit or expand the pre-filled text as desired, then save as above.

Using Wellness Tools

Wellness Tools are guided exercises to help manage stress and improve focus. Complete them as part of your daily routine.

1. Navigate to Wellness Tools via the Wellness dropdown.
2. Read through the instructions on any card (e.g., '4-7-8 Breathing').
3. Follow the exercise steps described on the card.
4. After completing the exercise, click 'Mark Complete.'
5. A confetti animation plays and the button turns to 'Completed Today.'
6. Your daily streak and total completion count update automatically on the card.

Completion state persists when you refresh the page. After midnight, all cards reset to allow a new daily completion.

4) Playing Focus Games

Games provide a mindful mental break. Scores are saved to your account automatically.

Brick Breaker:

1. Navigate to Games via the Activities menu and click 'Play Now' on the Brick Breaker card.
2. Click 'Start Game.' Use your mouse (move left/right) or arrow keys to control the paddle.
3. Press SPACE or click to launch the ball at the start of each life.
4. Destroy all bricks to advance to the next level. Each level increases ball speed.
5. Press P or ESC to pause. You have 3 lives; the game ends when all are lost.
6. Your score is automatically saved when the game ends. View the leaderboard in the Game Over modal.

Solitaire (Klondike):

1. Navigate to Games and click 'Play Now' on the Solitaire card.
2. The game loads automatically. Draw from the stock pile (top-left) by clicking it.
3. Drag and drop cards between tableau columns and foundation piles, or double-click a card to auto-move it to a foundation.
4. Move all 52 cards to the four foundation piles (Ace through King, by suit) to win.
5. Use the Hint button to highlight a valid move (costs 10 points). Use Undo to reverse your last move (costs 5 points).
6. Your final score is saved automatically when you win.

5) Admin Managing Content (Admin Users Only)

Admin users have access to the Manage Content panel for managing journaling prompts, exercises, and user accounts.

1. Log in with an admin account and navigate to the Dashboard.
2. Click 'Open Manager' on the 'Manage Content' card (visible only to admins).
3. Use the tab buttons at the top to switch between: Journaling Prompts, Games, Exercises, and Manage Users.
4. To add new content: click the 'Add [type]' button and fill in the dialogs.
5. To edit content: modify the text fields in any row and click 'Save.'
6. To delete content: click the red 'Delete' button on any row and confirm.
7. To manage users: switch to the 'Manage Users' tab to view, add, change roles, or delete user accounts.

Admin Cautions

- Admins cannot change their own role or delete their own account.
- Role changes take effect immediately - a demoted admin loses access instantly.
- Deleting a user is permanent and cannot be undone.

5.5 Troubleshooting and FAQ's

Common Issues and Solutions:

Issue	Solution
-------	----------

Cannot sign up - email rejected	Your email must end in @my.yorku.ca. Ensure you are using your official York University student email.
Password not accepted during sign-up	Your password must be at least 8 characters and include: one uppercase letter, one lowercase letter, one number, and one special character (! @ # \$ % ^ & *). Example: MyPass1!
Forgot my password	Currently, Reclaim does not have a self-service password reset. Contact the system administrator to reset your password.
'Save Mood Entry' button is greyed out	You must click one of the five mood emoji buttons before the Save button becomes active. Click a mood first, then save.
Mood not saving - network error	Check your internet connection. If the problem persists, refresh the page and try again. Ensure you are still logged in.
Habit streak reset unexpectedly	Streaks require consecutive daily completions. If you miss even one day, your streak resets. Complete your habit every day to maintain it.
Game score not saving	Scores are saved automatically when the game ends. Ensure you are logged in before playing. If you leave the page mid-game, the score will not be saved.
Page appears broken or unstyled	Try a hard refresh: Ctrl+Shift+R (Windows/Linux) or Cmd+Shift+R (Mac). If the issue persists, clear your browser cache.
Cannot access the page (redirected to login)	Your session may have expired. Log in again. Sessions last 24 hours.
Admin Manage Content card not visible	Only admin accounts see this card. If you require admin access, contact your system administrator.

Server not starting (local install)

Ensure Node.js v20+ is installed. Run npm install to install dependencies. Check that port 3000 is not in use by another application.

Frequently Asked Questions:

Q: Can I use Reclaim without a York University email?

A: No. Reclaim is designed exclusively for York University students and staff. A valid @my.yorku.ca email is required to create an account. This requirement cannot be bypassed.

Q: Is my data private? Can other users see my mood entries or journal?

A: Yes, your data is completely private. All mood entries, journal entries, habit data, and game scores are stored with your user ID and are only accessible to you when logged in. Other users, including other students - cannot see your data.

Q: Can I log more than one mood per day?

A: You can click Save Mood Entry multiple times on the same day, but only one entry per day is stored. Each subsequent save updates your existing entry for that day rather than creating a new one. The history always shows one entry per calendar day.

Q: How are habit streaks calculated?

A: A streak counts consecutive days where you marked the habit complete. For a daily habit: if you complete it on Monday, Tuesday, and Wednesday, your streak is 3. If you miss Thursday, your streak resets to 0. Completing it again on Friday starts a new streak of 1.

Q: What happens if I delete a habit?

A: Deleting a habit permanently removes it along with all completion history and streak data. This action cannot be undone. If you want to keep the history but stop actively tracking, use 'Mark as Done' instead, which moves it to the Completed section.

Q: My wellness tool 'Mark Complete' button is disabled. Why?

A: You have already marked that tool complete today. The button resets after midnight (based on your local time). Each wellness tool can only be marked complete once per day.

Q: Can I play games without being logged in?

A: You can view the Games page without being logged in, but you will not be able to play. A login prompt will appear, and scores require an account to be saved. Log in or create an account to access full game functionality.

Q: How do I change my account email or password?

A: Currently, Reclaim does not have a self-service profile editing feature. To change your email or password, contact your system administrator. Admins can update user records from the Manage Users panel.

Q: Does Reclaim work on mobile devices?

A: Yes. Reclaim is fully responsive and works on smartphones and tablets. The navigation bar collapses into a hamburger menu on small screens. The Brick Breaker game supports touch controls: drag left/right to move the paddle, and tap to launch the ball.

Q: What browsers are supported?

A: Reclaim supports all modern browsers: Google Chrome 90+, Mozilla Firefox 90+, Microsoft Edge 90+, and Safari 14+. For the best experience, Google Chrome is recommended. Internet Explorer is not supported.

Q: How do I access the admin panel?

A: Admin access requires an admin-level account, which must be created by a developer or existing administrator. Student accounts cannot be elevated to admin through the normal sign-up flow. If you need admin access, request it from your system administrator.

Getting Additional Help

If you encounter an issue not covered in this manual, the following resources are available:

- York Federation of Students (YFS) Health Services - yfs.ca/healthandwellness
- Good2Talk 24/7 Crisis Support Line - good2talk.ca
- York University Counselling Services - students.yorku.ca/counselling
- For technical issues with Reclaim itself, contact system administrator.

Crisis Support Resources

If you are experiencing a mental health crisis, please reach out to a support service immediately.

Good2Talk: 1-866-925-5454 (available 24/7 for post-secondary students in Ontario)

Crisis Services Canada: 1-833-456-4566
